Insights & Recommendation

- The Gross Profit denotes the Profitability of the Companies and that FedEx decreased there by more than 1% But increased by 2% in 2019 for UPS. The declining Sales Revenue being greater than consecutive previous year by 6% is not advisable for FedEx. The performance of FedEx also shows the Net Income to be reduced by 66% in 2019 from previous year but UPS being stable has reduced by only 8%.
- UPS is suitable for investment as the Operating margin for UPS is higher by 1% in 2019 showing better industrial status.
- Investors can also understand that Return on Asset for UPS is 4.65% better than FedEx. This is promising than FedEx for the shareholders, even the ratio of Debt/Equity ratio indicates no liability and only at 6.65 and is good for a year.
